Targeted consultation addressed to the participants to the stakeholder dialogue on Article 17 of the Directive on Copyright in the Digital Single Market

INTRODUCTION

The Directive on Copyright in the Digital Single Market (Directive 2019/790/EC, the ‘DSM Directive’) requires the Commission to issue guidance on the application of Article 17, in particular regarding the cooperation between online content-sharing service providers and rightholders. The guidance should take into account the discussions held during the stakeholder dialogue meetings organised by the Commission pursuant to paragraph 10 of that article. The DSM Directive is addressed to the Member States who are required to transpose it by 7 June 2021. At this stage, the guidance will focus on assisting Member States in that task.

Following an open call for interest to participate in the stakeholder dialogue, the Commission organised six stakeholder dialogue meetings between October 2019 and February 2020 to gather the views of relevant stakeholders on the main topics related to the application of Article 17.

This consultation paper builds on the discussions at the stakeholder dialogue and presents the initial views of the Commission services with the view to finalising the Commission guidance.

We encourage the representative organisations to gather the views of their members and to provide, to the extent possible, a coordinated reply to the consultation. Where this is not possible, replies can be provided by individual members.

About yourself

I. SCOPE OF SERVICES COVERED BY ARTICLE 17

Background

Article 17 applies to online content-sharing service providers as defined in Article 2(6) of the Directive. An online content-sharing service provider is defined as an information society service provider of which the main or one of the main purposes is to store and give the public access to a large amount of copyright-protected works or other protected subject matter uploaded by its users, which it organises and promotes for profit-making purposes.

Article 2(6) also provides a non-exhaustive list of excluded providers of services, which are not online content-sharing service providers within the meaning of the Directive.

Special rules apply to new online content-sharing service providers, which meet the conditions in Article 17 (6).

Possible elements for the guidance

The guidance should indicate how to transpose the definition of ‘online content-sharing service provider’ into national law and explain the different elements of the definition itself, as well as of the list of service
providers, which are expressly excluded.

The non-exhaustive nature of the exclusion for particular online service providers by use of the term 'such as' denotes that other service providers could also qualify as an excluded service provider on a case-by-case basis.

In order to provide legal certainty, Member States should explicitly set out in their implementing laws all elements of the definition of 'online content-sharing service provider' in Article 2(6), including the excluded service providers set out in Article 2(6). As regards these excluded service providers, the guidance should state that the Union legislature has expressly excluded from the scope of the definition the particular examples set out in Article 2(6).

For other services, which are not identified as examples but which may also be excluded, a case-by-case assessment would be necessary.

Recital 63 states that a case-by-case assessment would be required in order to determine whether an online service provider falls within the scope of the rules in Article 17. This does not affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to excluded service providers using copyright-protected content, as recalled by recital 64.

Article 2(6) should be read in the light of recitals 62 and 63. It order to increase legal certainty as to the scope and as an aid to interpretation, Member States should be advised to also transpose elements of Recitals 62 and 63. Member States should apply the different elements of the definition, such as the concept of 'large amount of copyright protected content' in the light of these recitals, while they should refrain from further defining these elements going beyond the text of the directive, in order to avoid fragmentation.

Member States should bear in mind that the definition is drafted in a sufficiently neutral manner, which takes account of possible changes in modes of delivery, technology and usage and the fact that the DSM Directive will have to be applied in circumstances, which may change over time.

**Question 1:** Are there any additional elements related to the definition of an online content-sharing service provider, besides those outlined above, which you consider require some guidance? If yes, please indicate which ones and how you would suggest the guidance to address them.

*2600 character(s) maximum*
• Guidelines on OCSSP definition should be simple and refrain from advising transposition of elements of recitals (RC) into national legislation because they are not part of the legal text; For example, “competition” and most other elements of RC 62-63 should not become elements of law because that would go beyond an interpretation. RC only serve the purposes of interpretation and not to add legal provisions from the backdoor.
• Authors should not have the burden to prove circumstances which are outside of their sphere and which have no role to play in relation to the act of making available or communication to the public of their works.
• The definition in Art. 2(6) has nothing to do with the categories of protected works uploaded. Any OCSSP is liable for all protected works uploaded regardless if works were less often uploaded than others or were not expected to. Such limits do not exist in IPR and are unjustified discrimination of visual authors.
• Repertoires which are less typically used on an OCSSP cannot be exempted by definition from the platforms’ liability. There is no reference made in the RC 63 to a repertoire identical to the one being uploaded in large amounts. To the contrary a case by case assessment using elements such as the audience and number of files of – any category of - protected works is required.
• MS should also be obliged to take into account the inclusion of visual works in video, audio-video, text and other media, which is a typical mass use, besides of use of stand-alone images.
• The guidance should not encourage member states (MS) to add more exceptions to the list in Art. 2(6)(2). The notion “such as” should be deleted in the implementation to national law to prevent causing confusion. “Such as” refers here to “Providers of services” which is too undetermined to comply with the principle of legal certainty. Art. 2(6) contains an exhaustive list of exceptions of online service providers from Art.17 liability.
• The guidelines should clarify that works uploaded to a platform which is excluded from the definition of OCSSP in Art. 2(6)(2) still require an authorization if they are protected by other provisions than Art. 17. This should be the case for instance for image works uploaded as parts of contributions to online encyclopedias or other repositories, if the works are created by third parties, not by the uploader or licensed by him. Such use would fall under Art. 2(a) and 3(1) Directive 2001/29 and also require that the authors of such works are credited.

II. AUTHORISATIONS (Art. 17 (1-2))

Background

Article 17(1) requires Member States to provide that online content-sharing service providers, as defined in Article 2(6), perform an act of communication to the public or an act of making available to the public for the purposes of this Directive when they give the public access to protected content uploaded by their users and therefore need to obtain an authorisation from relevant rightholders, for instance by concluding a licensing agreement. Under Article 17(2) the authorisation obtained by the online content-sharing service providers must also cover the acts carried out by users, under certain conditions.

Possible elements for the guidance

(i) Authorisation models

The guidance should explain how Member States should approach the requirement of ‘authorisation’ in Article 17(1). The term ‘authorisation’ is not defined and it should be interpreted in the light of the aim and objective of Article 17.
Article 17 is a lex specialis to Article 3 of Directive 2001/29/EC and of Article 14 of Directive 2000/31/EC. This is confirmed by Recital 64, which states clearly that Article 17 does not affect the concept of communication to the public or of making available to the public elsewhere under Union law, nor does it affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to other service providers using copyright-protected content. As such, Member States would not be able to rely in their transposition of Article 17 on their implementation of either of those directives in relation either to the notion of ‘authorisation’ or indeed for the notion of ‘communication to the public’. Therefore, Member States should explicitly introduce into national law the notion of ‘authorisation’ for the lex specialis ‘act of communication to the public’ in Article 17(1).

Article 17(1) provides that an authorisation may for instance include a licensing agreement and this is also set out in Recital 64. Accordingly, an authorisation may take the form of a licensing agreement but may also take another form in national law. The guidance could give indications of different authorisation schemes that Member States could provide for, taking into account the specificities and practices of different sectors. Both individual and collective licensing solutions should be possible. Extended collective licences (ECL) could be considered in specific cases and for specific sectors, provided that they comply with the conditions of Article 12 of the DSM Directive.

The guidance would also recall that rightholders are not obliged to grant an authorisation to online content-sharing service providers, as explained in recital 61. Nevertheless, where rightholders do not grant an authorisation, online content-sharing service providers are not liable for copyright infringements if they comply with the conditions set out in Article 17(4) (see section III.1).

In order to foster the grant of authorisations in any chosen form at national level and to ensure the effet utile of Article 17(1), Member States could be recommended to maintain or establish voluntary mechanisms to facilitate agreements between rightholders and service providers. For example, voluntary mediation mechanisms could be considered in specific cases or sectors to support parties willing to reach an agreement but facing difficulties in the negotiations.

(ii) Authorisations covering users

Member States should implement explicitly in their legislation Article 17(2) under which an authorisation granted to online content-sharing service providers should also cover acts carried out by (i) users acting for non-commercial purposes or (ii) users whose activity does not generate significant revenues. It is important to bear in mind that these authorised uses are in addition to what else is authorised for content-sharing service providers.

Under this provision, authorisations granted to service providers are deemed to cover the acts, within the material scope of the authorisation granted, that are carried out by users falling in any one of these categories (non-commercial purpose or non-significant revenues). It is sufficient for a user to satisfy one of these conditions to be covered by the authorisation.

The guidance could illustrate this provision, which would for example cover users uploading a home video including music in the background or users uploading a tutorial generating limited revenues, which includes music or images when no exceptions apply. On the other hand, users acting on a commercial basis and deriving significant revenues from their uploads would be outside the scope of or not covered by that authorisation (unless the parties have explicitly agreed to cover also these users contractually). Member States should not set out quantitative thresholds when implementing the concept of ‘significant revenues’
which should be examined on a case-by-case basis. Member States should be recommended to assess the notion of ‘significant revenue’ by reference to all the circumstances of the user’s activity in question, including whether there is a licence agreement where the parties have agreed on specific thresholds (which should however not go below what is authorised under Article 17(2)).

Member States should interpret the notion of authorisation in Article 17(2) in light of recital 69 according to which service providers do not have to obtain a separate authorisation when rightholders have already authorised users to upload specific content. In these cases, the act of communication to the public has already been authorised within the scope of the authorisation granted to the user. The same recital also indicates that service providers should not presume that their users have in all cases obtained all the necessary authorisations for the content they upload.

In order to enhance transparency and legal certainty, the guidance could encourage the Member States to put in place an exchange of information on authorisations between rightholders, users and service providers.

**Question 2:** Are there any additional elements related to authorisations under Article 17(1) and 17 (2), which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

- To achieve the purposes of Article 17(1) and (2) to close the value gap and to develop an efficient licensing market it is required that authorisations ensure that authors of protected content are also remunerated. This can be achieved in many different models depending on the OCSSP’s business model, and MS traditions. CMOs for visual works license exclusive rights individually and manage collective licensing models. Mass uses require collective management, such as blanket licenses, extended collective licensing (ECL) or mandatory collective management.

- MS should be made aware that images may be posted as stand-alone or displayed in video, audio-visual, broadcasts, books, newspapers, covers of books and other media. Visual authors have a right to obtain shares of revenues for use within media. MS have to ensure that authors have a right for remuneration. Being a new right its contractual transfer in the past and the remuneration of authors by intermediaries exploiting visual works may be excluded. Similarly to para 7 of the German proposal to implement Art. 17 MS should implement a provision ensuring that visual authors have a right to a share of remuneration directly from the OCSSP. It is the only efficient manner to contribute to the purpose of Art.17: closing the value gap and developing a licensing culture.

- New contractual law, Art. 18-21 is a good start to improve authors’ positions. The new right is not included in contracts and payments made to authors should not be presumed. To enforce contractual law requires burdensome and expensive legal procedures. Besides, authors fear to be blacklisted. Direct remuneration rights collected and distributed by CMOs to authors are an efficient way to pay authors and at the same time protecting authors from damages to their professional carriers.

[This response is continued in the attached paper “EVA complementary contribution”…]

**Question 3:** Do you have any concrete suggestions on how to ensure a smooth exchange of information between rightholders, online content-sharing service providers and users on authorisations that have been granted?

2600 character(s) maximum
The guidelines should focus on the principle of article 17 (1) and (2) which is to close the value gap and that OCSSPs have to seek authorization to develop a licensing culture. All licenses on offer should be concluded by OCSSPs, no matter of their size and if work repertoires are more or less frequently uploaded. This clear line facilitates flow of information about licenses. Information will be available at all parties concluding licenses. Licensing will create a culture of cooperation with OCSSPs and the CMOs.

Visual CMOs can inform about licensed upload of visual works, for instance when a CHI/museum seeks permission to reuse on social media contents displayed on their website already licensed based on Art.3(1) Directive 2001/29

The guidelines should remind that following Art. 16 CRM Directive users have to provide CMOs with all elements of information that is needed to develop a license.

However, we believe that introduction of voluntary mediation mechanisms and other voluntary mechanisms on MS level holds the risk that the necessary step to finally apply the new legislation in practice would be postponed further. Smaller CMOs are in disadvantage compared to most OCSSPs, in particular the international ones, because they may not have the capacities to permanently renegotiate. In order to make use of additional mechanisms parties need to dispose of the experts available to take part in mediation processes. However, CMOs should be given the opportunity to report the progress made in implementing Art. 17 on national and EU level for instance at contact committees.

III. SPECIFIC LIABILITY REGIME UNDER ARTICLE 17

Article 17(4) establishes a specific liability regime for online content-sharing service providers that have not obtained an authorisation from the relevant rightholders under the applicable national rules implementing Article 17(1). Therefore, the effet utile of this provision will depend on the system of ‘authorisation’ put in place by the Member State under Article 17 (1) and (2). As outlined in recital 61, the goal of Article 17 is ‘to foster the development of the licensing market between rightholders and online content-sharing service providers’. Article 17(4) only becomes applicable in those cases in which the primary goal of authorisation of acts of communication to the public performed by online content sharing service providers within the meaning of Article 17(1), for instance by concluding a licensing agreement, could not be achieved.

In the absence of an authorisation, Article 17(4) sets out three cumulative conditions, which service providers may invoke as a defence against liability.

The conditions in Article 17(4) are subject to the principle of proportionality, as specified in Article 17(5). In this respect, the guidance should give indications to Member States on the practical application of the proportionality criteria to the conditions set in Article 17(4), notably how the type, size and audience of the service, the availability of suitable and effective means and the related costs, as well as the type of content uploaded by the users could be considered in different cases.

1. BEST EFFORTS TO OBTAIN AN AUTHORISATION (ARTICLE 17(4)(a))

Background

The first condition in Article 17(4) letter (a) is that service providers should be liable for unauthorised acts of communication to the public, including acts of making available to the public, unless they demonstrate they have made best efforts to obtain an authorisation. The principle of proportionality, as set out in Article 17(5), should be taken into account when assessing whether a service has made its best efforts under Article 17.
(4) letter (a). Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

**Possible elements for the guidance:**

The guidance could give non-exhaustive indications of actions carried out by service providers that could constitute best efforts to obtain an authorisation by the service providers. In particular, it should illustrate, which action on the part of service providers would constitute best efforts. This would include any action taken by service providers to seek out and/or engage with rightholders and the response, if any, to such solicitation and/or engagement by rightholders. Member States may wish to include such actions, which could, if relevant, vary from sector to sector, in their transposition law.

The authorisation models defined by Member States pursuant to Article 17(1) will have an impact on how easily service providers may be able to fulfil the requirement of ‘best efforts’ to obtain an authorisation. The threshold of ‘best efforts’ may be more easily satisfied where a Member State has taken measures to facilitate the grant of authorisations, for example with regard to licensing models, mediation mechanisms or exchange of information. Where a Member State has opted for a system, which leaves greater flexibility in the authorisation regime, service providers may need to adduce evidence that they have tried and been unable to get an authorisation. Keeping records of service providers’ engagement with rightholders may help addressing this situation. The evidential standard to prove best efforts would depend therefore on the type of authorisation in national law. For example, participation in a voluntary mediation, where available, could be taken into account in order to satisfy best efforts.

The guidance should recall the importance of applying the best efforts obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5).

To illustrate the best effort obligation, the guidance should make clear that service providers have to engage proactively as a minimum with rightholders which can be easily identified and located, in order to seek an authorisation. This includes rightholders representing a broad catalogue of works or other subject matter, or their representatives with a mandate to act on their behalf such as collective management organisations (CMOs) acting in accordance with Directive 2014/26/EU.

At the same time, in accordance with the principle of proportionality, service providers should not be expected to proactively seek out all rightholders whose content may be uploaded on their services, in particular those who are not easily identifiable by any reasonable standard. The guidance should however explain that online content-sharing service providers should as a rule enter into negotiations with those rightholders that wish to offer an authorisation for their content, irrespective of whether their type of content (eg. music, audio-visual content, images, text, etc...) is prevalent or is less common on the website of the service provider. Nevertheless, pursuant to the principle of proportionality, in certain cases (notably in case of smaller service providers) a lower level of effort to obtain an authorisation may be expected for types of content which are less common on the website of a given service provider (e.g. for images or texts on a video-sharing platform).

In the light of Recital 61, licensing agreements should be fair and keep a reasonable balance between both parties. That recital also states that rightholders should receive appropriate remuneration for the use of their works or other subject matter. As a consequence, service providers refusing to conclude a licence offered on fair terms and which maintains a reasonable balance between the parties should not be considered to have deployed their best efforts to obtain an authorisation. On the other hand, service
providers should not be required to accept licensing offers that are not on fair terms and which do not keep a balance between the parties, including as regards the remuneration to be paid.

The guidance should refer to the relevant provisions of Directive 2014/26/EU applying to licences negotiated and concluded by CMOs, in particular Article 16 (conducts of negotiations and licencing terms) and Article 35 (resolution of disputes). As mentioned under Section II, Member States may also maintain or establish voluntary mechanisms aimed at facilitating the conclusion of licensing agreements between online content-sharing service providers and rightholders.

**Question 4: In which cases would you consider that an online content-sharing service provider has made its best efforts to obtain an authorisation, in light of the principle of proportionality? Please give some concrete examples, taking into account the principle of proportionality.**

The guidance should not open the door to undermine the scope of copyright protection of Art. 17(1) and (2). Service providers that fall under the definition of an OCSSP and are not subject to one of the excluded services of the exhaustive list in Art. 2(6) (2) are liable for the making available or communication to the public and have to obtain a license. OCSSPs have to actively seek a license in particular from all CMOs that represent authors of works which are uploaded on their services. The guidance should point out clearly that national rules below this level of protection are unlawful. All member states have to recognize the CMOs for visual repertoire and the International repertoire that each society is representing based on reciprocal agreements.

In particular CMOs should not be confronted with the burden of proof of additional parameters. CMOs should not be obliged by national legislation, as it is currently proposed in Germany, to prove that their members' uploaded works are typical for the platform, that the CMOs’ repertoires are representative for the content uploaded, that the licenses cover the territory of the legislation and that the CMO applies adequate conditions.

Such information is mostly unknown to authors, contrarily to platforms. As concerns the territorial coverage of licenses and the application of adequate conditions: they are already fully regulated and included on national level due to the Directive on collective rights management 2014/26. Article 16(3) of the CRM Directive provides that the users have to provide all information that the CMO needs to develop the license. Discrimination of visual authors goes against the overall goal to close the value gap and to provide authors with incomes from OCSSP use as well as hindering the development of a function licensing market. It infringes articles 16 and 17 of the Charter of Fundamental Rights.

**Question 5: In your view, how should online content-sharing service providers, in particular smaller service providers, make their best efforts to obtain an authorisation for content, which is less common on their service?**

2600 character(s) maximum
Authors should finally participate in profits gained by use of their works. Typically, it is the authors and their CMOs in Europe who are the smaller parties facing exploitation by multinational, mostly US-based social media and sharing platforms giving access to billions of images without permission.

- The term of “smaller” OCSSPs is undetermined and relative to the territories and markets in which they are active. In any case, if there are OCSSPs one could consider as smaller OCSSPs (safe of whatever this term could include) should be obliged to negotiate also with the national CMO for the visual sector or with the respective hub or one-stop-shop even if visual works were not the main content uploaded on such platform. It as minimum requirement. The purpose of Article 17(1) and (2) is to close the value gap and to develop a licensing culture between OCSSPs and authors. Clearly, this can only be the case if platforms are obliged to obtain authorisations and not by introducing a new safe-harbour category of “smaller OCSSPs”.

- CMOs are already providing tailored conditions, such as rebates on tariffs where it is appropriate for instance if OCSSPs have cultural or social purpose; also, start-ups are already exempted by definition. Exceptions beyond the Directive would single-sided put an additional burden on authors of visual works and hamper the achievement of the goals of the DSM Directive.

- No discrimination of visual authors should be accepted by member countries or else Articles 17 (2) protection of IPR and Article 16 freedom to choose a profession of the Charter of Fundamental Rights would be infringed;

- Visual CMOs offer already flexible agreements that suit the condition of any OCSSP. CMOs for visual works gather a large range of individual authors, which they are representing on an authors’ basis, not work by work basis. They are highly representative.

Question 6: Are there any additional elements related to Article 17(4)(a), which should be covered by the guidance besides those outlined above? If yes, please explain which ones and how you consider the guidance should address them.

2600 character(s) maximum

- MS should be asked to include Art. 12 (ECL) into their national legislation and enable its application for Article 17 uses. It would allow broad legal certainty for OCSSPs which would serve in particular the new or local OCSSPs. Support by MS would be appreciated.

- MS should also reflect to change Art.12 and to provide for ECL as a cross-border tool which will largely benefit the parties involved.

- Following Art. 17(4) OCSSPs have to seek authorisations for the protected works uploaded by their users regardless of the proportionality elements in Art. 17(5), such as size of the OCSSP, audience, type of works. If Art. 17 should become successful to close the value gap and to develop a licensing culture it must be expected from any OCSSP for the protected works uploaded to at least seek a license from CMOs or international HUBs offering such licenses, to negotiate and to conclude an agreement. However, the Commission proposes nonetheless to apply a lower level of best efforts to obtain a license based on a case by case approach and by applying proportionality elements from Art. 17(5). The Directive provides these elements to only apply to the case of best efforts to ensure unavailability of protected works when no authorization was obtained despite best efforts. The high standard of best efforts is diluted by this approach without any valid justification. The Commission also illustrates its ill interpretation by the example of visual works on a video-sharing platform. In particular, if the platform is “smaller”. If the guidelines will follow this wrong interpretation the door will be opened to arbitrary application of Art. 17 and to discriminatory treatment of authors and rightsholders. Even more, those authors and rightsholders would face a double dilution because the ill applied proportionality might be applied again to the best efforts to prevent availability on the service of unauthorized protected works.

2. ‘BEST EFFORTS’ TO AVOID UNAUTHORISED CONTENT (Art. 17(4)(b))
**Background**

The second condition set out in Article 17(4) is that online content-sharing service providers should be liable for the use of unauthorized content unless they demonstrate that they have made their best efforts, in accordance with high industry standards of professional diligence, to ensure the unavailability of specific works and other subject matter for which the rightholders have provided them with the relevant and necessary information. The principle of proportionality, as set out in Article 17(5), and Article 17(7) should be taken into account. Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

**Possible elements for the guidance:**

Member States should bear in mind that these provisions are subject to the obligation on them in Article 17 (7) and (9) to ensure that legitimate uses remain unaffected by the cooperation of service providers with rightholders. The guidance should give indications to Member States on how this could be achieved, as explained in section IV.

The guidance should recommend that in their implementing laws Member States should not mandate the use of technology or impose any specific technological solutions on service providers in order to demonstrate best efforts. This would not only ensure a technologically neutral and future proof application of Article 17(4)(b) but also provide for a less intrusive approach. The service providers together with rightholders may cooperate on the best way to approach identification of the works in question, including by recourse to technology taking into account that the cooperation should not lead to any general monitoring obligation.

The guidance should underline that service providers have to act diligently when making their best efforts to implement any relevant solutions. As stated in Recital 66, to assess whether a given service provider has made its best efforts, account should be taken of whether the service provider has taken all the steps that would be taken by a diligent operator to achieve the result of preventing the availability of unauthorized works or other subject matter on its website taking into account best industry practices and the effectiveness of the steps taken in light of all relevant factors and developments. However, service providers should remain free to choose the technology or the solution that they consider the most appropriate to comply with the best efforts obligation in their specific situation, given that account should be taken of the principle of proportionality.

The stakeholder dialogue showed that content recognition technology is already used today to manage the use of copyright protected content, at least by the major online content-sharing service providers. Besides content recognition technology based on fingerprinting, other solutions, such as watermarking, solutions based on metadata and key word search or a combination of different technologies are currently deployed to detect unauthorized content.

Therefore, in most cases, it is expected that service providers will rely (or continue to rely) on technological tools in order to comply with their obligation under Article 17(4)(b) but it is not a prerequisite for the application of Article 17(4). The guidance should in this context recall that the deployment of any solution, including use of technology, such as content recognition technologies, has to respect Article 17(7) and 17 (9), which lays down safeguards for legitimate uses (see section IV below).
The guidance should also recall the importance of applying the ‘best effort’ obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5). In this respect, the guidance should give indications to Member States along the following lines:

- The type, size and audience of the service: larger service providers with a significant audience may be expected to deploy more advanced and costly solutions/technologies than ‘smaller’ service providers, with more limited audiences and resources. It could be more proportionate to expect smaller service providers to resort to simpler solutions (like metadata or key word search) as long as these solutions are effective. In some cases, notably for small service providers, relying on ex post action following rightholders’ notifications (notice and take down) may be proportionate, as explained in recital 66.

- The availability of suitable and effective means and the related costs should also be considered, for example when service providers buy solutions from third parties/technology providers, when these are developed in-house as well as the costs related to human review in the context of disputes (see Section IV). The cumulative cost of different solutions that may need to be implemented by a service provider should also be considered, as well as limitations of technologies depending on the type of content.

- The type of content uploaded by the users: when a service provider makes available different types of content, the level of efforts to be made may vary depending on whether the content is prevailing in their website or residual. It can be expected that service providers make more efforts regarding the former as compared to the latter.

In line with Article 17(4)(b), the guidance should underline that the best efforts to ensure the unavailability of specific unauthorised content are to be assessed on the basis of the ‘relevant and necessary information’ rightholders must provide to online content-sharing service providers. Whether any information provided by rightholders is “relevant and necessary information” in any given situation should be assessed on a case-by-case basis. Recital 66 specifies that if no such information is provided by rightholders, service providers are not liable for unauthorised uploads of unidentified content.

The guidance would provide some examples of what may constitute relevant and necessary information in different cases. Such information will vary depending on the solutions deployed by service providers (for example metadata on the work such as title, author/producer, duration; fingerprints or the actual content file). The information provided by rightholders should be relevant and accurate to allow service providers to take action on that basis. Member States should be free to define sanctions for abuse of the cooperation mechanism laid down in Article 17, such as the provision of false information.

Flexibility could be left to rightholders and service providers to agree on mutually convenient cooperation arrangements in view of ensuring the unavailability of unauthorised content, within the boundaries of the safeguards for legitimate uses.

**Question 7: In which cases would you consider that an online content-sharing service provider has or has not made its best efforts to ensure the unavailability of specific unauthorised content in accordance with high industry standards of professional diligence and in light of the principle of proportionality and the user safeguards enshrined in Article 17(7) and (9)? Please give some concrete examples.**

*2600 character(s) maximum*
Best efforts to ensure unavailability of unauthorised specific works following Art. 17(4)(b) is unlikely to apply in a market where licenses are easily available. However, even under a license, it remains necessary that specific works can be withdrawn in particular when their use conflicts with moral rights.

ACRs and other identifiers, such as metadata, can be technically developed for the visual repertoire but the limitations in its liability lies in the fragmented market for a huge repertoire; also OCSSPs focussed on ACR tools for music and audio-visual works and did not develop tools to identify images. Fingerprinting developed by our members provides good services for individual distribution of collected revenues but is far from being as efficient as ACR in other sectors.

The reasons lie in the fragmented way images are created and exploited and the huge masses of image works. The same image maybe available from different sources, each with different reference data or metadata providing conflicting information. The contents of metadata depend on the ‘value’ chain of the marketing of a work. Parties included in the chain may rip-off metadata, enter or add their identifier or develop their own reference file. Professional photographers sell non-exclusively photos to picture agencies or publishers, they post them directly on blogs or other sites to reach out to clients with unpredictable next steps in the chain. Photography is often sold non-exclusively between picture agencies. There is no guarantee that data included in image files are correct and complete. In case of conflicting metadata, the author is in the weaker position to claim his or her rights.

Collective management organisations have the capacity to join many authors and rightsholders in order to offer licenses for large communities, but not based on work by work machine identification. In this framework, we estimate a best effort by OCSSPs to ensure unavailability of specific content to be the application of any technology deployable by the OCSSP to take and keep down unauthorised content and its equivalent. In the case of visual works, this would be proportionate because, as it is to be presumed that blanket licenses for visual works will be provided, take and stay down requests will be isolated cases, mostly on moral rights grounds.

**Question 8: Which information do you consider ‘necessary and relevant’ in order for online content-sharing service providers to comply with the obligation set out in Article 17(4)(b)?**

2600 character(s) maximum

Links to the infringing content.

**Question 9: Are there any other elements related to the best efforts to ensure the unavailability of unauthorised content, besides those outlined above, for which you think some guidance is needed? If yes, please explain which ones and how you consider the guidance should address them.**

2600 character(s) maximum

/

**3. NOTICES SUBMITTED BY RIGHThOLDERS TO REMOVE UNAUTHORISED CONTENT AND THE RELEVANT AND NECESSARY INFORMATION TO PREVENT FUTURE UPLOADS (ART. 17(4)(c))**

**Background**

The third condition set out in Article 17(4) (c), which is also subject to the principle of proportionality laid down in paragraph 5 and the safeguards for legitimate uses in paragraph 7, is that online content-sharing service providers should be liable for the use of unauthorised content unless they demonstrate that they have acted expeditiously, upon receiving a sufficiently substantiated notice from the rightholders, to disable access to, or to remove from their websites, the notified works or other subject matter, and that they have
made best efforts to prevent their future uploads in accordance with Article 17(4)(b). Pursuant to Article 17 (8), the application of Article 17 should not lead to any general monitoring obligation.

**Possible elements for the guidance:**

The guidance should give indications to Member States on how they should implement Article 17(4)(c) in their national laws. Member States should bear in mind that the two conditions set in letter (c) are subject to the principle of proportionality provided for in Article 17(5). The ‘best efforts’ that service providers should make to prevent future uploads of notified works should be approached in the same way as in relation to Article 17(4)(b). The guidance should recall the importance of assessing whether the best efforts have been made by service providers on a case-by-case basis.

Member States should also bear in mind that the application of Article 17 should not lead to any general monitoring obligation and that legitimate uses have to be safeguarded as provided for in paragraphs 7 and 9, and as further explained in section IV. This is particularly relevant for the application of the second part of letter (c), according to which service providers have to make their best efforts to prevent future uploads of notified works.

The guidance should also indicate that when implementing Article 17(4) letter (c), Member States need to clearly differentiate the type of information rightholders provide in a ‘sufficiently substantiated notice’ for the removal of content (the ‘take-down’ part of letter (c)) from the “relevant and necessary information” they provide for the purposes of preventing future uploads of notified works (the ‘stay-down’ part of letter (c), which refers back to letter b).

With regard to the elements to be included in a ‘sufficiently substantiated notice’ submitted by rightholders, the guidance should recommend Member States to follow in their implementation the Commission Recommendation on Measures to Effectively Tackle Illegal Content Online[1]. The information provided should be specific and detailed in nature in a way in which it verifies not only the work or protected subject matter and the specific rights held by the rightholder but where it is alleged to be on the website in question. Points 6 to 8 of the Recommendation list elements that could be included in the notices. As the Recommendation is a horizontal non-binding instrument and therefore not copyright specific, existing national rules and current practices for copyright notices, which may contain more details, could also be applied.

Article 17(4) letter (c) second part (the ‘stay down’ obligation) refers back to letter (b) of the same paragraph. As a consequence, in order for the service providers to be able to deploy their best efforts to avoid future uploads under this provision, rightholders have to provide them with the same type of ‘relevant and necessary’ information which is relevant for the application of letter (b). This means for example that, if a service provider uses fingerprinting technologies to avoid future uploads of notified works, receiving as information only the title of a song and its location, as identified in a notice, would be insufficient. In this case, to allow service providers to avoid future uploads of notified works, rightholders would need to provide the services with fingerprints or content files. If rightholders have already provided the ‘necessary and relevant’ information under letter (b) of Article 17(4) with regard to a specific notified work, they should not be obliged to re-submit the same information for the purposes of ‘stay-down’, but this should be assessed on a case-by-case basis.

**Question 10:** What information do you consider a sufficiently substantiated notice should contain in order to allow the online content-sharing service providers to act expeditiously to disable access /remove the notified content?

2600 character(s) maximum

- As regards the cooperation between CMOs and OCSSPs in general, especially the GAFA and similar, it should be made clear that requiring CMOs to significantly adapt their systems to the OCSSPs’, would be a disproportionate effort to comply with a provision that is rather meant to be putting the burden of information on the user side, in a proportionate manner.

- As regards the visual sector in particular, its peculiarities should be taken into account and especially the fact that the whole sector functions building the repertoire by author and not by work, which makes fingerprinting technology very hard to apply extensively and in a completely accurate fashion. ACR tools are indeed available and under development also by CMOs, but they are deployed for distribution of collected revenues purposes and not for monitoring or structured communication with third parties like the GAFA.

**Question 11:** Are there any other elements related to the 'notice and take down' and 'notice and stay-down' systems provided for in Article 17(4)(c) that should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

/  

4. **SPECIFIC LIABILITY REGIME FOR START-UPS (ARTICLE 17.6)**

**Background**

Article 17(6) provides for a specific liability regime for ‘new’ companies, with lighter conditions. This is in practice a two-tier regime applicable to services, which have been active in the EU for less than 3 years and have an annual turnover of less than 10 million euros with different rules applying to them depending on the audience they attract. In practice:

(i) If those ‘new’ services have less than 5 million unique visitors they are required to make their best efforts to obtain an authorisation (Art. 17 (4) (a)) and they have to comply with the ‘notice and take down’ obligation under Art. 17(4) (c), first part.

(ii) If those ‘new’ services have more than 5 million unique visitors they are subject to the same obligations of best efforts to obtain an authorisation and ‘notice and take down’ as services with a smaller audience but in addition, they also need to comply with the obligation to avoid future uploads of notified works under Article 17 (4) (c) second part (‘stay down’ obligation).

For both categories of services, the condition of best efforts to ensure the unavailability of unauthorised content, provided for in Article 17 (4)(b), is not applicable.

**Possible elements for the guidance:**

The guidance should provide indications to the Member States for the implementation of the specific liability regime set out in Article 17(6). It could focus on certain elements of the liability regime, which may raise
practical questions, such as how to calculate the annual turnover of the services and the number of monthly unique visitors. It would remind for example that the annual turnover needs to be calculated in accordance with the Commission Recommendation 2003/361/EC for SMEs. It would also explain that the number of monthly unique visitors refers to visitors across the Union, as explained in recital 66, and not per Member State.

The guidance should also clarify that the principle of proportionality provided for in Article 17(5) and the safeguards for legitimate uses under Article 17(7) apply to the liability regime for ‘new’ services. In this context, the guidance could provide some examples of what best efforts could be expected from the ‘new’ services covered by Article 17(6) for obtaining authorisations and where applicable, for preventing future uploads of notified works, in the light of the principle of proportionality.

**Question 12: What specific elements of the specific liability regime for “new” services, provided for in Article 17(6), should in your opinion be addressed in the guidance and how?**

IV. SAFEGUARDS FOR LEGITIMATE USES OF CONTENT (Art. 17(7)) and REDRESS MECHANISM FOR USERS (Art. 17(9))

**Background**

Article 17(7) and 17(9) lay down rules aiming to ensure that any action undertaken together by service providers and rightholders does not lead to the unavailability of content which does not infringe copyright. This is of particular importance (but not only) for the application of Article 17(4) letter (b) and second half of letter (c), whereby online content-sharing service providers need to make their best efforts to ensure the unavailability of unauthorised content and to prevent future uploads of notified works. Article 17(7) also provides that the Member States must ensure that users in each Member State are able to rely on the existing exceptions or limitations for quotation, criticism, review and use for the purpose of caricature, parody or pastiche when they upload and make available their content on online content-sharing service providers’ websites. Under Article 5 of Directive 2001/29/EC these exceptions were optional and therefore not all Member States have implemented them. Article 17 (7) makes these exceptions mandatory for all Member States for the uses of copyright protected content covered by this provision.

Article 17(9) requires online content-sharing service providers to put in place a redress mechanism allowing users to challenge the blocking or removal of their content. Disputes can occur when content-sharing service providers disable or remove access to user uploaded content, whereas users consider their uploads legitimate, for example uses of third party content under an exception or limitation to copyright.

Article 17(9) further requires that the Directive shall in no way affect legitimate uses, and shall not lead to any identification of individual users nor to the processing of personal data, except in accordance with Directive 2002/58/EC and Regulation (EU) 2016/679. It also requires online content-sharing service providers to inform their users in their terms and conditions that they can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.
Possible elements for the guidance:

The guidance should explain what Member States have to do to implement Article 17(7) and the relationship between that provision and Article 17(4). Article 17(7) is addressed to safeguarding any content uploaded by users that does not infringe copyright or related rights including by virtue of the application of any exception or limitation. Such non-infringing use is often referred to as ‘legitimate use’. In addition, Article 17(7) second paragraph introduces certain mandatory exceptions for users that upload content online.

Member States should be recommended to explicitly transpose in their law the text of Article 17(7) first paragraph whereby the cooperation between online content-sharing service providers and rightholders, in particular under Article 17(4), must not result in the prevention of the availability of works or other subject matter uploaded by users, which do not infringe copyright and related rights, including where such works or other subject matter are covered by an exception or limitation.

Member States are required to transpose in their national laws the mandatory exceptions in Article 17(7) second paragraph covering the case of content uploaded by users on online content-sharing services for:

(a) quotation, criticism, review

(b) use for the purpose of caricature, parody or pastiche

Whilst the exceptions or limitations in Directive 2001/29/EC are optional in nature and addressed to any user, Article 17(7) applies to all users in all Member States who must be able to rely on these exceptions or limitations when they upload content on online content-sharing service providers’ websites. Recital 70 explains that allowing users to upload and make available content generated by them for the purposes of the exceptions or limitations in Article 17(7) is particularly important for ‘striking a balance between the fundamental rights laid down in the Charter of Fundamental Rights of the European Union (‘the Charter’), in particular the freedom of expression and the freedom of the arts, and the right to property, including intellectual property’.

(i) Legitimate uses under Article 17(7)

Examples of legitimate uses may include (1) uses under exceptions and limitations, (2) uses by those who hold or have cleared the rights in the content they upload or covered by the authorisation under Article 17 (2); (3) uses of content not covered by copyright or related rights, notably works in the public domain or for example content where the threshold of originality is not met.

The guidance could recall that uses under exceptions and limitations cover the upload and making available of content under the mandatory exceptions in Article 17(7) but also under other – optional - exceptions that Member States may have implemented under Article 5 of Directive 2001/29/EC. Some of those are particularly relevant for uses on online content-sharing services and Member States, which have not done so, could be recommended to implement them for uses covered by Article 17 (for ex. incidental use)[1].

Member States that may have already implemented the exceptions made mandatory by Article 17(7) under
Directive 2001/29/EC should review their legislation to make sure it complies with Article 17(7) and if needed, adapt it accordingly. Member States whose laws do not provide for these exceptions will have to transpose them as a minimum for the uses covered by Article 17.

The guidance should give indications to the Member States on the interpretation of the mandatory exceptions, in line with the case law of the Court of Justice of the European Union.

(ii) Practical application of Article 17(4) in compliance with Article 17(7)

The guidance should also give indications to the Member States as to how they can direct online content-sharing service providers and rightholders to apply in practice Article 17(4) in compliance with Article 17(7). The objective should be to ensure that legitimate content is not blocked when technologies are applied by online content-sharing service providers under Article 17(4) letter (b) and the second part of letter (c).

The guidance should explain that the balancing sought by the Directive requires, besides the effective complaint and redress mechanism discussed in the subsequent section, that the cooperation between service providers and rightholders does not result in blocking legitimate uses. Therefore, the guidance would take as a premise that it is not enough for the transposition and application of Article 17 (7) to only restore legitimate content ex post, once it has been blocked. When service providers apply automated content recognition technologies under Article 17(4), on the basis of the relevant and necessary information provided by the rightholders, legitimate uses should also be considered at the upload of content.

It should be born in mind that in the current state of the art, content recognition technology cannot assess whether the uploaded content is infringing or covered by a legitimate use. However, technology may assist service providers to distinguish uploads likely to be infringing for the purposes of Article 17(4) from uploads likely to be legitimate, based on the application of technical parameters as explained below. In order to ensure compliance with Article 17(7) in practice, automated blocking of content identified by the rightholders should be limited to likely infringing uploads, whereas content, which is likely to be legitimate, should not be subjected to automated blocking and should be available.

This distinction between likely infringing and likely legitimate uploads would not introduce any new legal concepts, nor would it imply a final legal assessment as to whether an upload is legitimate or not, but it would be a reasonable and practical way for service providers to apply Article 17(4) in line with Article 17(7) when they use content recognition technology. This mechanism should also not prevent the possible use of technology for reporting and remunerating the use of authorised content under contractual terms agreed by rightholders and service providers.

Under this approach, when uploads match with the relevant and necessary information provided to them by the rightholders, service providers should assess their legitimacy in compliance with Article 17(7) and proceed, where applicable, to block likely infringing uploads. In such a case users should still be able to contest the blocking under the redress mechanism provided for in Article 17(9), which requires human review for the contested content before a decision is taken whether it should stay down or be restored.

In cases when it is not possible for online content-sharing service providers to determine on a reasonable basis whether an upload is likely to be infringing and the service providers use content recognition technology, the service providers should notify the user that (part of) the upload matches with the information (e.g. fingerprint) provided by the rightholders. If the user contests the infringing nature of its upload, service providers should submit the upload to human review for a rapid decision as to whether the
content should be blocked or be available. Such content should remain online during the human review. If rightholders disagree with the decision of service providers to keep the content up, they would be able to submit a notice in compliance with Article 17(4) letter (c) to ask for the removal of the content that they consider infringing. If, on the other hand, upon being notified by the service provider, the user does not contest the infringing nature of the upload, the content could be blocked without further review, without prejudice to users’ ability to rely on other available redress, including judicial review.

The human review process should be swift and allow both rightholders and users to provide their views. If, as a result of the human review, the service provider decides to disable or remove the uploaded content, it should inform the user of the outcome of the review; and the user should be able to have recourse to the out-of-court dispute resolution mechanism, provided for in Article 17(9).

The distinction between likely infringing and likely legitimate uploads could be carried out by service providers in cooperation with rightholders based on a number of technical characteristics of the upload, as appropriate. Relevant technical parameters could be, among others, the level of match with the reference file provided by rightholders for the purposes of Article 17(4), the length/size of third party content used in the upload and whether it is surrounded by user’s own content. For example, in application of such technical parameters, the upload of a video of 30 minutes, where 29 minutes are an exact match to a reference file provided by a rightholder, could likely be considered an infringing one, unless it is in the public domain or the use has been authorised. On the other hand, a user generated video composed by very short extracts, such as one or two minutes of different scenes from third party films, accompanied by additional content such as comments added by the user for the purpose of reviewing these scenes could be more likely to be legitimate because potentially covered by an exception such as the quotation exception. Similarly still images uploaded by users which match only partially the fingerprints of a professional picture could be legitimate uploads under the parody exception, as they could be ‘memes’, i.e. new images created by users by adding elements to an original picture to create a humoristic or parodic effect.

The application of technical parameters should not be arbitrary and should be without prejudice to any legal decision on the nature of the content uploaded, i.e. whether it is an infringement of copyright or a related right or not.

Member States should remain free to introduce specific measures to discourage the abuse of this mechanism by users or rightholders.

Finally, in order to minimise the risk that authorised content uploaded with the authorisation of rightholders is blocked, Member States may consider recommending service providers to use the practice of ‘whitelisting’, which allows rightholders to indicate to the service providers users and uses that they have authorised. For example, in case of co-productions or partnerships, broadcasters can indicate to service providers which other broadcasters or partners are authorised to upload their content. Such uses would not require the application by service providers of content recognition technologies for blocking purposes.

(iii) Complaint and redress mechanism under Article 17(9)

Article 17(9) requires Member States to provide for a complaint and redress mechanism that online content-sharing service providers have to make available to users in the event of dispute over the blocking or removal of their content; it also requires Member States to ensure that out-of-court redress mechanisms are available for the settlement of these disputes. When approaching Article 17(9) Member States should
bear in mind that the obligation on service providers to put in place a complaint and redress mechanism should be implemented in line with the Union law rules on freedom to provide services, including the ‘country of origin’ principle provided for in Article 3 of Directive 2000/31/EC on e-commerce, when applicable.

The guidance should give indications to the Member States on how they could instruct service providers to apply the complaint and redress mechanism in practice. It could suggest that when content is blocked as a result of the application of the mechanism described above for the practical application of Article 17(4) in compliance with Article 17(7), the contested content, which is likely infringing should stay down pending the human review required under the redress mechanism. This would correspond to the approach that only uploads likely to be infringing could be automatically blocked under Article 17(4) in compliance with Article 17(7) and Article 17(9). Content that service providers remove ex post under the notice and take down procedure under Article 17(4) letter (c) should only stay down pending the redress, provided that the notice submitted by rightholders is a ‘sufficiently substantiated’ notice.

In line with the requirement of Article 17(9) that the complaints by users be processed without undue delay, the guidance should suggest that as a rule service providers and rightholders must react to complaints from users within a reasonably short timeframe to ensure that the mechanism is expeditious. If rightholders do not react in a reasonable timeframe, content which has been blocked or taken down should become available or be restored. The guidance should also recall rightholders’ obligation to duly justify their requests to have content uploaded by users blocked or removed and encourage rightholders to provide this justification in clear and simple terms to make it understandable to an average internet user.

If the final decision by service providers is to keep the content unavailable, users must be able to contest this decision through the impartial out-of-court dispute settlement mechanism, which Member States have to make available. The guidance should indicate that the out-of-court dispute settlement mechanism can be an existing one but with relevant expertise to handle copyright disputes. It should also be easy to use and with no cost for users.

The guidance should also indicate to the Member States that they need to implement in their law the obligation on online content-sharing service providers to inform their users in their terms and conditions that users can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.

The guidance could also recommend how service providers can increase users’ awareness of what may constitute legitimate uses, as required by Article 17(9). For example, Member States could encourage the service providers to put in place standard forms for users to contest the blocking or removal of their content. This could also be accompanied by information aiming to foster users’ awareness of copyright concepts and to encourage a responsible behaviour when uploading content online.

Finally, the guidance should underline that any processing of personal data and identification of users that may be required in the context of the application of Article 17 needs to be done in compliance Directive 2002/51/EC on e-privacy and Regulation 2016/679 on general data protection. Member States should monitor the correct application of these rules.

**Question 13:** Do you have additional suggestions to implement Article 17(7) to ensure a fair balance between different fundamental rights notably between copyright and freedom of expression? Would you agree with the approach presented above or do you consider other solutions could be used?

**2600 character(s) maximum**

- The approach presented goes beyond the Directive text; instead collective management and in particular ECL should be promoted; the complex problems as described are solved under collective management concept.
- MS may be obliged to ensure that users may rely on exceptions for parody, caricature and pastiche but only in relation to use based on Art. 17(1). Implementation of directives are in general not uniform in each country and do not have to be to comply with Art. 17(7). Moreover, some MS already provide for exceptions which are broader in scope and need no modification. MS should not go beyond to what is required, bearing in mind that each exception reduces the authors’ rights to control the use of their works and the capacity to claim remuneration, as is regularly confirmed by the CJEU.
- MS should also be guided as concerns “pastiche” which appears to be a “catch-all” element, to determine clear limits to the term.
- It is essential that the guidance demands MS to provide for authors’ equitable remuneration for use under these exceptions. The exceptions add high value to OCSSPs because memes and gifs are very often uploaded and make social and sharing media very lively, increase strongly the traffic and therefore the value for the advertisement market. Without remuneration the exceptions are a clear violation of the three-step-test.
- There is no justification for introduction of any other exceptions. The implementation of the exhaustive list in Art. 5 of the 2001/29 Directive is concluded and raises no concerns. In the stakeholder dialogue some OCSSPs advocated an exception for incidental inclusion, not as an exception in the legal sense but rather as a broad catchall element allowing arbitrary exclusion of a maximum of works from Art. 17. and as a pretext to deny authors’ rights. There appears to be a general misunderstanding of the concept of exceptions to exclusive rights.

**Question 14:** Do you have additional suggestions on how the guidance should address the implementation of the complaint and redress mechanism and of the out-of-court dispute settlement under Article 17(9)?

**2600 character(s) maximum**

- Human intervention in the redress mechanism is important as much as for the mechanism itself to be as quick as possible, in order to minimize the possible economic and moral damage to the visual authors.
- Some details of the cooperation in these cases could be dealt with during the negotiations between CMOs and OCSSPs.

**Question 15:** Are there other elements than those outlined above that should be addressed for the concrete implementation of Article 17(7) and (9)? If yes, please explain which ones and how the guidance should address them.

**2600 character(s) maximum**

In EVA’s view collective management, also in the form of ECL based on Art. 12 is the most efficient solution for Art. 17 uses. During the stakeholder dialogue users supported collective management in particular in relation to Art. 17(7) because it ensures that OCSSPs continue their services and both, users and OCSSPs benefit from legal certainty. The obligation of MS following Art. 17(7) to ensure that users can rely on exceptions and limitations for the list of purposes can be fulfilled by collective licensing. It is not necessary to amend these exceptions within the EEA. Human review is not generally required but needs to be possible in case of opt-out by individual authors. ECL has been very successful in Scandinavian countries and has the
advantage of transparent negotiations, equal treatment and opt-outs for non-members. Other management models with comparable results, such as blanket licensing and mandatory collective management are applied traditionally in other MS.

V. INFORMATION TO RIGHTHOLDERS (Art. 17(8))

Background

Under Article 17(8), online content-sharing service providers need to provide rightholders, at their request, with information on the functioning of the tools used for ensuring the unavailability of content. Where they conclude licensing agreements with rightholders, the service providers also need to provide them with information on the use of their content, without however having to provide rightholders with detailed and individualised information for each work or other subject matter identified (recital 68).

Possible elements for the guidance

The guidance should recall the different elements set out in Article 17(8) and explain in particular how Member States should direct the parties to apply this provision in practice. It should give indications as to the information that service providers should provide to rightholders, if requested, to comply with it. For example, information on content recognition tools deployed by service providers to avoid unauthorised content could include descriptions on the efficiency of these tools, the general parameters used for their deployment, as well as any changes made overtime to the operation of these tools. As regards information on the use of content covered by the agreements concluded between service providers and rightholders, the guidance should recall that service providers are not required to provide detailed and individualised information on each work, and encourage the development of standardised reporting through voluntary cooperation between stakeholders. Some more specific requirements on reporting exist already under Article 17 of Directive 2014/26/EU and govern the relationship between users and CMOs.

In line with the Commission Recommendation on illegal content online, in order to ensure a high level of transparency to users, the guidance could recommend that Member States encourage online content-sharing service providers to publicly report on the functioning of their practices with regard to Article 17(4).

Question 16: What are the most important elements that the guidance should cover in relation to the information that online content-sharing service providers should provide to rightholders on the functioning of their tools to ensure the unavailability of unauthorised content and on the use of rightholders’ content under Article 17(8)? Please provide examples of particular information that you would consider as covered by this obligation.

The following elements in reference to Art. 17(8) are also subject to the efforts which are proportionate best efforts to obtain a license. They are basic obligations of users and should already apply to determine best efforts to obtain a license.

- OCSSPs should inform about their business model, the accessibility from countries and regions, duration of display, audience reached, turnover and other information determined with the CMO on a case by case basis.
- The guidance should clarify that OCSSPs providing its users with personal accounts, partly open to the public, partly open to a limited circle of “friends” determined by the users should be liable following Art. 17(1) and (2) for the protected works uploaded. OCSSPs should provide information to CMOs about works used in
these contexts. Due to the model of service figures may only be available for the service itself. Because such services also perform an act of making available or communication to the public of content uploaded by its user, the sharing of information about the protected works is also subject to the OCSSP’s liability. The obligations extends to information available for the service.

- Information on usage of works should be provided to CMOs also in light of Art. 17 of the CRM directive on Users’ obligations and through mechanisms and practices settled with the CMO in the licensing contract.

**Question 17:** Are there any other elements beyond the ones listed above which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

**VI. OTHER TOPICS**

**Question 18:** Do you think the guidance should address any other topic related to Article 17? If yes, please indicate which topics you consider should be included in the guidance and how you consider the guidance should address them.

2600 character(s) maximum

The guidance should provide authors to obtain a share of remuneration directly from OCSSPs for protected works that include visual works are sold/licensed by broadcasters, publishers, producers. Art. 7 of the German proposal contains such rights which would be an important improvement for visual authors. Undoubtedly art work, photography, illustration, graphic arts and other visual works are part of video, audio-video, broadcasts, text works and other media. It is recognized that visual authors have right to obtain shares of remuneration paid for the use of such protected material. Because Art. 17 rights are not transferred and remuneration obtained in the past does not include remuneration for this use. To ensure that at least some payment based on Art. 17 will reach the authors it is essential to provide a direct remuneration right for visual authors.

**FINAL REMARKS**

Should you wish to upload any other documentation to support your views, please do so.
